

Journal of Experimental & Clinical Assisted Reproduction is an Open Access, peer-reviewed, online journal that considers research into reproductive endocrinology, infertility, bioethics and the advanced reproductive technologies. The journal aims to report on important developments impacting the field of human reproductive medicine and surgery.

Journal of Experimental & Clinical Assisted Reproduction considers the following types of articles:

- Research - reports of data from original research.
- Book reviews - short summaries of the strengths and weaknesses of a book. They should evaluate its overall usefulness to the intended audience.
- Case reports - reports of clinical cases that can be educational, describe a diagnostic or therapeutic dilemma, suggest an association, or present an important adverse reaction.
- Commentaries - short, focused and opinionated articles on any subject within the scope of the journal. These articles are usually related to a contemporary issue, such as recent research findings.
- Debate articles - present an argument that is not essentially based on practical research. Debate articles can report on all aspects of the subject including sociological and ethical aspects.
- Hypotheses - short articles presenting an untested original hypothesis backed solely by previously published results rather than any new evidence.
- Methodology articles - present a new experimental method, test or procedure. The method described may either be completely new, or may offer a better version of an existing method.
- Reviews - comprehensive, authoritative description of any subject within the journal's scope.
- Short reports - brief reports of data from original research.

Reasons for publishing in Journal of Experimental & Clinical Assisted Reproduction

- All the articles published in *Journal of Experimental & Clinical Assisted Reproduction* are **Open Access**. This means:
 1. They are **universally accessible online without charge**.
 2. They are immediately deposited and **permanently archived** in PubMed Central, the free-access repository of peer-reviewed research in the life sciences run by the USA's National Institutes of Health, as well as other national archives.
 3. **Authors retain the copyright** of their articles and also grant any third party the right to use the article freely. This means that you are free to print out copies, email it to your colleagues, and/or post it on the web.
- **High visibility** for your work - anyone with Internet access can read your article, free of charge.
- All articles are **entered into PubMed** making your work easy to find, read and cite.
- Articles are **published immediately upon acceptance**.
- **Electronic submission and peer-review** makes the whole process of publishing your article simple and efficient.
- Publishing online means **unlimited space** for figures, extensive datasets and video footage.
- **Professional formatting** meets the standards expected by researchers.
